

**Founder and President of PlaNet Finance
First President of the European Bank for Reconstruction and
Development**

Jacques Attali is a French economist and has served for many years as an advisor to French President François Mitterrand. He is the chairman of the international consulting firm A&A and the founder of four international institutions: Action Against Hunger, Eureka, EBRD, and Positive Planet.

He was the first President of the European Bank for Reconstruction and Development (EBRD). Under his leadership it promoted investments which aimed to protect nuclear power plants and the environment, develop infrastructure and reinforce private sector competitiveness. He is also President and founder of PlaNet Finance, a leading non-profit, micro-finance organisation, and since 2012 he has been a member of the supervisory board of Kepler Capital Markets, a Swiss broker based in Geneva.

He led François Mitterrand's campaign for Presidential election in 1974 and 1981. Once elected, Mitterrand named Attali as his special adviser, and entrusted him with the role of "sherpa" (personal representative to a head of state) for the G7 summits. Later in 1985 he co-founded the European programme EUREKA, a European inter-governmental programme for new technologies, which developed, among other things, the MP3.

In 1998 he founded PlaNet Finance, a non-profit organisation which is active in more than 80 countries and provides funding, technical assistance and advisory services to 10,000 micro-finance players and stakeholders.

Attali is a frequent speaker and in regular demand as a commentator on current affairs by the global media. Foreign Policy Magazine included Attali in the Top 100 Public Intellectuals in the World in 2008. He is the author of over fifty books on topics ranging from economics to music, translated into more than twenty languages. His main work in economics and sociology has examined trends in human history and their use in forecasting the future. In his influential book Millennium, Attali created the concept of a "nomad society" to characterise the nature of future civilisation. It inspired the creation of the Java programming language by Bill Joy and John Gage at Sun Microsystems.
